RE: Sequence Database Search Request

My apologies for the typo...

The correct serial number is: 09/701,618 CRFE

Thanks, Eric

RE: Sequence Database Search Request

There is no valid CRF for this serial number, please provide us with another valid serial number. (in our in-house

Thank you. Gary

I would like to have a standard search performed using the following SEQ. ID NOs. from application: 09/701,608

SEQ ID NO. 1 (DNA ~1156 nucleotides long)

SEQ ID NO. 2 (Polypeptide ~141 amino acids long)

SEQ ID NO. 3 (DNA ~1040 nucleotides long)

SEQ ID NO. 4 (Polypeptide ~141 amino acids long)

Please perform a standard nucleic acid search for SEQ ID NO. 1 AND SEQ ID NO. 3

Please perform a standard polypeptide search for SEQ ID NO. 2 AND SEQ ID NO. 4 AND also perform a search for any nucleic acid sequences which encode SEQ ID NO.2 and SEQ ID NO.4

NOTE: SEQ ID NO. 1 is identified as encoding SEQ ID NO. 2 SEQ ID NO. 3 is identified as encoding SEQ ID NO. 4

and SEQ ID NO. 2 is highly similar to SEQ ID NO. 4 (differs by 14 amino acids) and they have the same function

Thanks, Eric

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Submitted (03-DEC-2001) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk clone requests: clonerequest@sanger.ac.uk on Oct 6, 2000 this sequence version replaced gi:10129439.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequence submission only a small overlap as described above.

The following abbreviations are used to associate primary accession the WORNPER given in the feature table with their source databases: on the WORNPER database can be found at http://www.sanger.ac.uk/Projects/C.elegans/wormpep This sequence in the primary accession on the WORNPER part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr10

This sequence is the entire insert of clone RP11-19501 The true left end of clone RP11-135A24 is at 6540 in this sequence. The true right end of clone RP11-135A24 is at 6540 in this sequence. The true right end of clone RP11-135A24 is at 6540 in this sequence. The sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate 30); an attempt was made to resolve all sequenced with an alternate assembly was confirmed by restriction digest. RP11-19501 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. http://www.sanger.htm.

NOTE: This is a "working draft" sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chemistry: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.960731

                                                                                                      repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: FMBL; Sw: SWISSPROT: Tr: TREMBL; Wp:, WORMPEP; Information the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/Celegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group. Further information can be found at http://www.sanger.ac.uk/Projects/Celegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10. Consortium/LLNL at: http://image.llnl.gov Spries: IRAK Plate: 15 Row: a Column: 2
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
